CLIMATE CLUB SETS OUT BLUEPRINT WITH OECD ANALYSIS TO TURN GREEN INDUSTRIAL AMBITION INTO INVESTMENT

- **The COP31 Presidency welcomes the Climate Club guidance on country platforms for industry transformation**
- **Insights from Organisation for Economic Co-operation and Development (OECD) analysis contribute directly to the green industrialisation priority of the COP31 Action Agenda**

ANTALYA, Nov 19 – The COP31 Presidency welcomed today the Climate Club *Guidance on Country Platforms for Industry Transformation: Insights from OECD Analysis,* addressing one of the central challenges facing industrial decarbonisation: how to move beyond fragmented, project-by-project approaches and build coordinated pipelines capable of attracting investment.

Country-led investment platforms can act as a powerful coordination and scaling mechanism to translate industrial ambitions into tangible investment and implementation outcomes. By moving beyond fragmented project-by-project approaches, these platforms can help coordinate domestic and international stakeholders, align investments, financial and technical assistance around national shared priorities, build pipelines of bankable projects and mobilise finance at scale. In doing so, they can anchor industry transformation in broader economic development objectives, including energy, infrastructure, skills and just transition.

Reflecting the implementation-oriented focus of this COP, this guidance helps governments design and operationalise industry country platforms, providing a framework informed by existing platforms such as the Türkiye Industrial Decarbonisation Investment Platform that can be adapted to national circumstances. It outlines key principles across five dimensions:

1. Strategic foundations and governance;
2. National readiness and enabling investment conditions;
3. Pipeline creation and project development;
4. Finance mobilisation and investment scaling; and
5. Monitoring, accountability and learning, complemented by project selection guidelines.

This guidance builds on extensive analytical work by the OECD and the convening power of the Climate Club and delivers on the COP31 focus areas of Decarbonisation Hubs and International Cooperation under the Green Industrialisation priority theme.

We encourage governments, development partners, public and private finance institutions, international organisations and industry to leverage this guidance early on in any process to establish a country platform aiming at supporting industry transformation.

Dr. Tuğba Dinçbaş, Director of the COP31 Action Agenda and Co-Chair of the Climate Club:

OFFICIAL

"Country platforms are most effective when they are country-led, investment-focused and grounded in industrial realities. Drawing on emerging experiences including Türkiye's Industrial Decarbonisation Investment Platform, this guidance offers practical insights for countries seeking to coordinate partners and scale investment in industrial transformation."

Jaime de Bourbon de Parme, Director of the OECD Environment Directorate:

“Industry transformation presents a major opportunity to drive economic growth, create quality jobs and strengthen resilience. Country-led investment platforms can help bridge the gap between ambition and implementation by bringing together governments, industry and financial partners to turn national priorities into investable projects. Drawing on the OECD’s analytical expertise and international experience, this guidance offers a practical framework for countries to design effective platforms, mobilise investment at scale and deliver concrete results.”

Michael Apicelli, Head of Secretariat:

“One of the clearest messages from this guidance is that industry transformation will not happen project by project or institution by institution. Countries need a mechanism that can align industrial priorities, enabling policies, project development and finance behind a shared vision. Country platforms can provide that mechanism.”

ENDS
